

HEX BOAT

Enhance, Protect, Thrill

Our **self-adhesive solutions**
for the **marine environment**

HEXIS

ENHANCE

With an unlimited choice of colours, finishes and textures, **SKINTAC's** highly conformable solid coloured films combine functionality and visual appeal.

They are perfect for customising decks or hulls - even below the waterline.

They are resistant, durable and will not yellow or crack.

→ Films for full wraps

Take a look at our ranges **HXONE SUPER GLOSS**, **HX30000**, **HX20000**

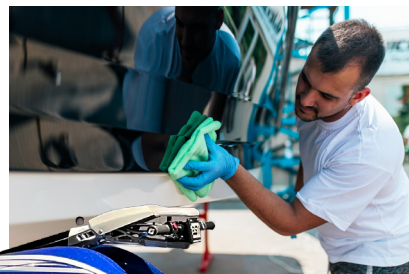

The reinforced films in the **100 Series** can be used for permanent or temporary decor changes. They adhere perfectly to a wide range of difficult surfaces. Once laminated, these films offer improved resistance to UV rays from the sun, moisture and sea salt.

→ Printable films for outdoor use

Perfect for producing **decorative kits** and ideal for protecting **jet skis**, with increased resistance to impact and vibration.

→ Films for deco kits and extreme sports

PROTECT

BODYFENCE protection films work like a truly invisible barrier against impacts and abrasion. Due to their **self-healing** and **anti-fouling** properties, they help to preserve the paintwork against scratches caused by mooring buoys, and the hull against adverse weather conditions and contact with seawater.

→ Bodywork protection film

THRILL

The **HEX'PERIENCE** range has been designed for **protection** and **interior decoration**.

It offers an unlimited number of possible combinations, with a choice of different textures and finishes. It is perfectly suitable for **interior refurbishment!**

There is no better way to cost-effectively replace noble materials such as marble, leather, wood, metal and carbon fibre in a boat cabin.

Renovation and refitting are a great way to make your boat feel like new, and even increase its resale value.

→ *Films for interior decoration*

SKYTINT films protect **against sunlight**, which is more intense when reflected off the water, while at the same time preserving **privacy** and **safety** on board.

They contribute to improving **thermal comfort** in the cabin, avoiding glare and interference with the navigation instruments.

→ *Solar films*

Why does a boat wrap outperform paint?

- Durability
- Customisation
- Ease of maintenance

More resistant and **durable** than conventional paint, self-adhesive films retain their shine for years, even in extreme marine conditions.

No more colour fading or cracking!

As an **alternative to paint** on the hull, they allow for swift colour changes and offer total freedom: a variety of colours, patterns and textures for a unique style.

A **cost-effective** choice, they are easy to apply and reduce downtime and maintenance costs. In addition, they are easy to remove and protect the original finish.

Less work, fewer materials, more savings!

Environment-friendly, the films used for boat wraps are made from vinyl, a recyclable material.

A sensible choice compared to the harmful chemicals used in conventional paints.
