Styling, protecting, refurbishing

Our **self-adhesive**
solutions for **adventurers**

STYLING

With their wide range of colours, finishes and textures, the highly conformable **SKINTAC** films are perfect for wrapping recreational vehicles. Combining visual appeal and functionality, these films allow you to transform the appearance of a motorhome, van or campervan.

Whether you are looking for a unique design or an stylish finish, **SKINTAC** films adapt perfectly to the curved and even complex surfaces of the vehicle.

→ Wrapping films

Take a look at our *HXONE SUPER GLOSS*, *HX30000* and *HX20000* ranges for outstanding results.

These films are resistant to outdoor conditions, offering protection against everyday wear and tear.

Printable - **100 Series / KROMPRINT**

These films are ideal for easily transforming the exterior appearance of a vehicle. With a chrome effect or simply by composing your own designs, printable cast films retain their shine and robustness, even after many kilometres of exposure to sunlight.

→ Printable films for an outdoor use

PROTECTING

BODYFENCE Protection films – The invisible barrier against outdoor elements

They act as a real defence against impacts, abrasions and scratches. Be it against impacts caused by objects such as branches or abrasions due to road conditions, these films preserve the integrity of the bodywork of a van or motorhome.

Thanks to its self-healing properties, micro-scratches disappear under the effect of heat, ensuring ongoing protection. In addition, its anti-soiling properties keep the vehicle clean for longer.

REFURBISHING

The **HEX'PERIENCE** range has been specially designed for interior decoration. With its multitude of textures and finishes, it offers an infinite number of combinations to customise the interior of recreational vehicles according to taste and your needs. It is the ideal option for a quick and contemporary interior refit.

It is the ideal option for a quick and contemporary interior refit.

Cost effective refurbishment of interior spaces

There is no better way to replace expensive materials such as marble, leather, wood or even carbon fibre found in recreational vehicle interiors, while providing a durable high-end finish. Be it for renovating door panels, walls or even worktops, they add a touch of luxury without the high costs of traditional materials.

HEX'PERIENCE decorative films not only allow you to customise the visual appeal of the interior of your vehicle, but also protect it from everyday wear and tear. This contributes to keeping your van or motorhome in 'almost' new condition, while improving the atmosphere and comfort on board.

Refurbishing for a higher resale value

A well-refurbished interior can enhance the original appearance and also add value to the recreational vehicle when it comes to reselling. A carefully designed and personalised refurbishment allows you to stand out and attract future buyers more readily.

SKYTINT Solar films – Comfort and safety on board

SKYTINT films are designed to reduce the impact of direct sunlight, in particular sunlight reflected off the road. These films protect you from UV rays whilst preserving privacy on board recreational vehicles. They contribute to improving thermal comfort in the passenger compartment, thus creating a more pleasant environment during journeys or stops in the countryside. They also minimise glare for the driver and passengers.

Ideal solutions for upgrading, protecting and refurbishing recreational vehicles.

Whether you want to revamp a campervan, refurbish a vintage caravan or customise a converted van, self-adhesive solutions represent a practical, visually appealing and durable alternative to conventional paint.

Why opt for self-adhesive films?

Unlimited customisation: with a variety of colours, textures and finishes, transforming a campervan into a true work of art on wheels is very easy.

Extra Protection: the bodywork is protected against chips, scratches, dirt and damage caused by road conditions and weather.

A cost-effective alternative: For older recreational vehicles, a wrap – which is less expensive – can avoid the high costs of respraying.

The approximate cost of a full wrap for a campervan is 2,000–5,000 euros.

Renovation & Reversibility: A wrap efficiently masks imperfections, scratches or faded paintwork.

A variety of customised applications with self-adhesive films from HEXIS:

- ✱ **Full or partial exterior wraps:** bodywork, roof, doors, decorative striping, windows.
- ✱ **Indoor wraps:** cupboards, walls, worktops.
